

# NeuroFedora

Free Software for Free Neuroscience

---

NeuroFedora Contributors

## How: Research Pipeline

---

# General workflow

# Tools of the trade

## Experimental:

- EEG, ECoG, intracellular and extracellular single and multi neuron recording,
- CT, DOI, MRI, f-MRI, MEG, PET,

## Data analysis:

- Statistics,
- Machine Learning, Big Data, Deep learning,

## Theory and modelling:

- Simulators of all kinds,

### Tools for the dissemination of knowledge<sup>4</sup>:

- visualisation,
- academic writing,
- non academic writing: blogging . . . ,
- pod-casting,
- video making,
- creating teaching materials,
- collaborative tools and utilities

---

<sup>4</sup>also to a non-specialist audience.

## Free/Open (neuro) Science

---

## The ideal, in short:

Free/Open Science:

Everyone should have the freedom to share, study, and modify scientific material.

FOSS:

Everyone should have the freedom to share, study, and modify software<sup>5</sup>.

Free/Open Science includes and relies heavily on Free/Open Source Software (FOSS).

## NeuroFedora: why, how, what?

---

## Neuroscience community: highly multidisciplinary

- various specialities: biologists, mathematicians, physicists, chemists, psychologists, ... ,
- small proportion of trained software developers

## FOSS: Developers and users

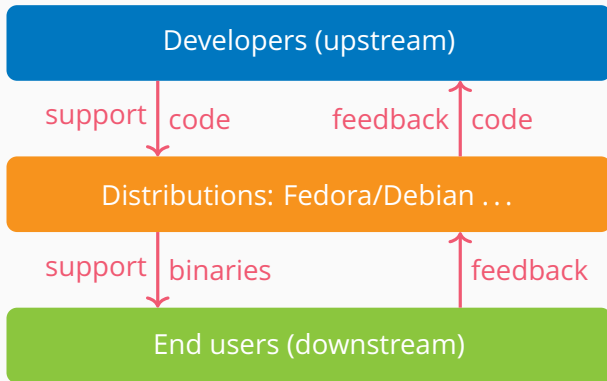

## (Anecdotal) notes on development of research software

- often **single developer**, or small development teams
- limited **maintenance**, short-lived projects
- limited **access to hardware/resources**
- limited **code quality**
- limited **use of established best practices**
- limited **testing for correctness (!)**
- **complex dependency chains**
- lack of **documentation and support**
- lack of **community development know-how**

## (Anecdotal) notes on users of research software

- waste time and effort installing (and reinstalling) their software stacks
- rarely run test suites (!)
- rarely report bugs upstream
- rarely send improvements upstream
- are unaware of helpful development tools

# Distributions liaison between developers and users

## Distributions, like Fedora, are in a unique position:

- liaison between upstream and users
- have the infrastructure
- follow best practices in software development
- constantly work on community development
- learn from one another—train while working
- disseminate information to end-users

## Primary goal:

- Provide a ready to use, integrated FOSS platform for neuroscientists<sup>7</sup>.

## Secondary/collateral goals:

- help improve the standard and maintenance of tools
- help users develop software development skills
- make neuroscience accessible to non-specialists

---

<sup>7</sup> Researchers, academics, hobbyists, anyone!

# NeuroFedora: current metrics

- Turned a year old, in September 2019<sup>8</sup>,
- 20 volunteers
  - 16 package maintainers
  - 5 designers, newcomers
  - only 5 from a neuroscience background
- software:
  - 135 tools (packages) ready to install<sup>9</sup>:
    - Neuron, InterViews, NEST, Genesis, Brian (v1 and v2), Moose, python-libNeuroML, PyLEMS, PyNWB, ...
  - ~180 in queue<sup>10</sup>.
    - NeuroMLlite, pyNeuroML, NetPyNE, ...

---
