How: Research Pipeline

Tools of the trade

${\sf Experimental:}$

- EEG, ECoG, intracellular and extracellular single and multi neuron recording,
- CT, DOI, MRI, f-MRI, MEG, PET,

Data analysis:

- Statistics,
- Machine Learning, Big Data, Deep learning,

Theory and modelling:

• Simulators of all kinds,

NeuroFedora: why, how, what?

Neuroscience community: highly multidisciplinary

- various specialities: biologists, mathematicians, physicists, chemists, psychologists, . . . ,
- small proportion of trained software developers

7/15

Developers (upstream) support code feedback End users (downstream)

(Anecdotal) notes on development of research software

- often single developer, or small development teams
- limited maintenance, short-lived projects
- limited access to hardware/resources
- limited code quality
- limited use of established best practices
- limited testing for correctness (!)
- complex dependency chains
- lack of documentation and support
- lack of community development know-how

8/15

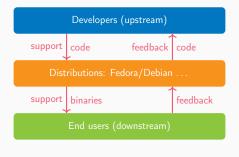

(Anecdotal) notes on users of research software

- waste time and effort installing (and reinstalling) their software stacks
- rarely run test suites (!)
- rarely report bugs upstream
- rarely send improvements upstream
- are unaware of helpful development tools

10/15

Notes

Distributions liaison between developers and users

11/15

Distributions, like Fedora, are in a unique position:

- liaison between upstream and users
- have the infrastructure
- follow best practices in software development
- constantly work on community development
- learn from one another—train while working
- disseminate information to end-users

12/15

NeuroFedora:

Primary goal:

 Provide a ready to use, integrated FOSS platform for neuroscientists⁷.

Secondary/collateral goals:

- help improve the standard and maintenance of tools
- help users develop software development skills
- make neuroscience accessible to non-specialists

NeuroFedora: current metrics

- Turned a year old, in September 2019⁸,
- 20 volunteers
 - 16 package maintainers
 - 5 designers, newcomers
 - only 5 from a neuroscience background
- software:
 - $\bullet~$ 135 tools (packages) ready to install $^9\colon$
 - Neuron, InterViews, NEST, Genesis, Brian (v1 and v2), Moose, python-libNeuroML, PyLEMS, PyNWB, ...
 - \bullet ~180 in queue 10 .
 - $\bullet \ \ \mathsf{NeuroMLlite}, \ \mathsf{pyNeuroML}, \ \mathsf{NetPyNE}, \ \ldots$
- in its second iteration
